Valuation Estimate

Valuation Estimate

PitchBook's Valuation Estimates provide a data-driven view of the expected pre-money valuation a venture-backed company would be priced at under current market conditions. These estimates are designed to give a timely sense of a company's potential market value between funding rounds. This estimate is generated using a regression model detailed and is based on PitchBook's historical data of VC backed companies. The estimate is not investment advice nor is it a substitute for professional due diligence. [Learn more](#)

Valuation Estimate Range

Min

Max

VC Exit Predictor

VC Exit Predictor: Exit Type

Evaluates VC-backed companies' likelihood of a successful exit for investors, and the most likely exit type. Generated by a machine learning algorithm, leveraging Market Positioning, Company Performance Indicators, Active Investors, and Deal Activity. The algorithm does not consider additional factors that may be relevant to a company's exit chances and should not be used as a replacement for investment due diligence. [Learn more](#)

Predicted Exit Type

☐ Success
